The NuPower Xtender™ Model NW-BA-12B04A-09 is a small, lightweight, and power-efficient bidirectional amplifier ideal for extending the communication range of half-duplex S-band transceivers running constant-envelope or near-constant-envelope waveforms. The bidirectional amplifier generates 16 Watts of RF power from 2000 to 2500 MHz in transmit mode and the integrated low-noise amplifier provides a minimum of 13 dB of gain in receive mode.

Based on the latest gallium nitride (GaN) technology, the Xtender offers greater than 30% power efficiency at most frequencies and its compact size makes it ideal for integration into space-constrained platforms. Accepting a +5 dBm RF input, the Xtender provides 35 dB of gain. The Xtender also features over-voltage and reverse-voltage protection and operates over a wide temperature range of -30 to +60 °C.

Extend your operational communication range with NuPower™ amplifiers from NuWaves Engineering.
